

SELECT within SELECT Tutorial

Language: English · 日本語 · 中文

This tutorial looks at how we can use SELECT statements within SELECT statements to perform more complex queries.

name	continent	area	population	gdp
Afghanistan	Asia	652230	25500100	20343000000
Albania	Europe	28748	2831741	12960000000
Algeria	Africa	2381741	37100000	188681000000
Andorra	Europe	468	78115	3712000000
Angola	Africa	1246700	20609294	100990000000
...				

Using nested SELECT

- 10 Three time bigger

Bigger than Russia

1. 🤔

List each country name where the population is larger than that of 'Russia'.

world(name, continent, area, population, gdp)

```
SELECT name FROM world
WHERE population > (SELECT population FROM world
                   WHERE name='Russia')
```

Submit SQL

Restore default

Correct answer

name	
Bangladesh	
Brazil	
China	
India	
Indonesia	
Nigeria	
Pakistan	

sqlzoo select in select 1

1. 🤔

List each country name where the population is larger than that of 'Russia'.

world(name, continent, area, population, gdp)

SELECT name FROM world
WHERE population > (SELECT population FROM world
WHERE name='Russia')

Obejrzyj w YouTube

Submit SQL

Restore default

Richer than UK

2. 🤔

Show the countries in Europe with a per capita GDP greater than 'United Kingdom'.

Per Capita GDP

```
SELECT name FROM world
WHERE continent = 'Europe' AND gdp/population > (SELECT gdp/population FROM world
                                                WHERE name = 'United Kingdom')
```

Submit SQL

Restore default

Correct answer

name	
Andorra	
Austria	
Belgium	
Denmark	
Finland	
France	
Germany	

sqlzoo select in select 2

Show the countries in Europe with a per capita GDP greater than 'United Kingdom'.

Per Capita GDP

```
SELECT name FROM world
WHERE continent='Europe' AND
      gdp/population>3635.673
```

Submit SQL

Restore default

Neighbours of Argentina and Australia

3. 🤔

List the name and continent of countries in the continents containing either Argentina or Australia. Order by name of the country.

```
SELECT name, continent FROM world
WHERE continent IN (SELECT continent FROM world
                   WHERE name IN ('Argentina', 'Australia'))
ORDER BY name
```

Submit SQL

Restore default

Correct answer

name	continent	
Argentina	South America	
Australia	Oceania	
Bolivia	South America	
Brazil	South America	
Chile	South America	
Colombia	South America	
Ecuador	South America	

Between United Kingdom and Germany

4. 🤔

Which country has a population that is more than United Kingdom but less than Germany? Show the name and the population.

```
SELECT name, population FROM world
WHERE population > (SELECT population FROM world
                   WHERE name = 'United Kingdom')
AND population < (SELECT population FROM world
                  WHERE name = 'Germany')
```

Submit SQL

Restore default

Correct answer

name	population	
France	67841000	

Percentages of Germany

5. 🤔

Germany (population 80 million) has the largest population of the countries in Europe. Austria (population 8.5 million) has 11% of the population of Germany.

Show the name and the population of each country in Europe. Show the population as a percentage of the population of Germany.

The format should be Name, Percentage for example:

name	percentage
Albania	3%
Andorra	0%
Austria	11%

...

Decimal places

Percent symbol %

```
SELECT name,CONCAT(ROUND(100*population/(SELECT population FROM world WHERE name = 'Germany'),0),'%') AS
percentage FROM world
WHERE continent = 'Europe'
```

Submit SQL

Restore default

Result:

name	percentage	
Albania	3%	
Andorra	0%	
Austria	11%	
Belarus	12%	
Belgium	14%	
Bosnia and Herzegovina	5%	
Bulgaria	9%	

sqlzoo select in select 5

Germany (population 80 million) has the largest population of the countries in Europe. Austria (population 8.5 million) has 11% of the population of Germany.

Show the name and the population of each country in Europe. Show the population as a percentage of the population of Germany.

Decimal places

Percent symbol %

To get a well rounded view of the important features of SQL you should move on to the next tutorial concerning aggregates. To gain an absurdly detailed view of one insignificant feature of the language, read on.

We can use the word ALL to allow >= or < or < or <= to act over a list. For example, you can find the largest country in the world, by population with this query:

```
SELECT name
FROM world
WHERE population >= ALL(SELECT population
                        FROM world
                        WHERE population>0)
```

You need the condition **population>0** in the sub-query as some countries have **null** for population.

Bigger than every country in Europe

6. 🤔

Which countries have a GDP greater than every country in Europe? [Give the name only.] (Some countries may have NULL gdp values)

```
SELECT name FROM world
WHERE GDP > ALL(SELECT GDP FROM world WHERE continent = 'Europe' AND gdp IS NOT NULL)
```

Submit SQL

Restore default

Correct answer

name	
China	
Japan	
United States	

We can refer to values in the outer SELECT within the inner SELECT. We can name the tables so that we can tell the difference between the inner and outer versions.

Largest in each continent

7. 🤔

Find the largest country (by area) in each continent, show the continent, the name and the area:

```
SELECT continent, name, area FROM world x
WHERE area>= ALL(SELECT area FROM world y
                 WHERE y.continent=x.continent
                 AND area IS NOT NULL)
```

Submit SQL

Restore default

Correct answer

continent	name	area
Africa	Algeria	2381741
Oceania	Australia	7692024
South America	Brazil	8515767
North America	Canada	9984670
Asia	China	9596961
Caribbean	Cuba	109884
Europe	Kazakhstan	2724900

The above example is known as a **correlated** or **synchronized** sub-query.

Using correlated subqueries

A correlated subquery works like a nested loop: the subquery only has access to rows related to a single record at a time in the outer query. The technique relies on table aliases to identify two different uses of the same table, one in the outer query and the other in the subquery.

One way to interpret the line in the **WHERE** clause that references the two table is "... where the correlated values are the same".

In the example provided, you would say "select the country details from world where the population is greater than or equal to the population of all countries where the continent is the same".

First country of each continent (alphabetically)

8. 🤔

List each continent and the name of the country that comes first alphabetically.

```
SELECT continent, name FROM world x
WHERE name <= ALL(SELECT name FROM world y
                 WHERE x.continent = y.continent)
```

Submit SQL

Restore default

Correct answer

continent	name	
Africa	Algeria	
Asia	Afghanistan	
Caribbean	Antigua and Barbuda	
Eurasia	Armenia	
Europe	Albania	
North America	Belize	
Oceania	Australia	

Difficult Questions That Utilize Techniques Not Covered In Prior Sections

9. 🤔

Find the continents where all countries have a population <= 25000000. Then find the names of the countries associated with these continents. Show name, continent and population.

```
SELECT name, continent, population FROM world x
WHERE area>= ALL(SELECT population FROM world y WHERE x.continent = y.continent)
```

Submit SQL

Restore default

Correct answer

name	continent	population
Antigua and Barbuda	Caribbean	86295
Australia	Oceania	23545500
Bahamas	Caribbean	351461
Barbados	Caribbean	285000
Cuba	Caribbean	11167325
Dominica	Caribbean	71293
Dominican Republic	Caribbean	9445281

Three time bigger

10. 🤔

Some countries have populations more than three times that of all of their neighbours (in the same continent). Give the countries and continents.

```
SELECT name, continent FROM world x
WHERE population > ALL(SELECT population*3 FROM world y WHERE x.continent = y.continent AND x.name != y.name)
```

Submit SQL

Restore default

Correct answer

name	continent	
Russia	Eurasia	
Australia	Oceania	
Brazil	South America
